

T70x ENGINE TEST SET

H60/S70i BLACK HAWK

An UxValidator™ Series Test Set

Electrical System Verification

- Isolate engine from airframe at the firewall.
- Isolate sensor from wire at transmission and fuel signal conditioner.

Engine Indication

- Emulate full specification range not just operational indications.
- Eliminates need to “run” engine for signal generation.

Know Operational Status Instantly. Act Accurately.

The T70x Engine Test Set simplifies the testing, troubleshooting and functional verification of the engine, rotor and fuel systems from sensor to indication.

The pods connect to the aircraft harnesses at sensor connection locations greatly reducing set up and additional maintenance.

System status is easily determined through the UxValidator user interface check boxes, fields and adjustable outputs. The included manual supplement leads the maintainer through each test providing system validation criteria.

Size and Weight (INCHES/POUNDS)

UxValidator Test Unit			
Width	Height	Depth	Weight
